

Freshwater Fish Meal

The production facility is processing dehydrated, high protein fish meal using a patented process and technology at a plant located in Beardstown, Illinois. The plant processes fresh, just caught invasive Asian carp species, brought to the plant daily via licensed commercial fishermen from surrounding rivers. Protein is guaranteed at a minimum of 62% with all product being analyzed by certified labs with results being made available to customers.

Product Specifications

Typical

Crude Protein	63%
Moisture	8%
Ash	21%
Fat	8%
